

Media Player 10 Tips and Tricks

I use the “Media Player” that ships with Microsoft Windows whenever possible. I have learned some useful tips and tricks of the Media Player.

1. Put the Media Player as a Quicklaunch item on the taskbar. Right-click an empty portion of the taskbar, choose TOOLBARS, then choose QUICKLAUNCH. If you need to resize the taskbar, you must “Unlock the Taskbar” in the same menu area.
2. Update to VERSION 10! This is a must. Check your version of Media Player by going to HELP in the menus of Media Player, then to ABOUT MEDIA PLAYER. If it is not version 10, then you really should update! Go back to HELP, and then CHECK FOR PLAYER UPDATES... This will update you to the latest version of Media Player which is Version 10.
