

Satellite Internet In the Country Still!

Well, I have had my Xplornet Satellite Internet up and running since February and I am proud to say that I have had 100% “uptime”.

I have tested a VOIP (Voice Over Internet Protocol) telephone system. Even at the slowest package - the 512Kbps package - the VOIP phones performed with a small “lag” time of about 1 second. I am anticipating that if I were to upgrade my Satellite Internet package to 1Mbps that I can eliminate almost all lag time. The 512Mbps package costs \$54.99 per month, the 1Mbps package is \$89.99 per month.

Here at Software Emporium Inc in Dawson Creek we have two certified installers ready to install your Xplornet Satellite Internet product.
